Dear Sir:

In response to the Official Action dated March 14, 2002, please amend the application as follows:

In the Specification:

Please replace the paragraph on page 19, beginning on line 4 and ending on line 10 with the following amended paragraph:

The present invention provides a method of modifying the surface of a polymeric substrate, e.g., to improve the wettability of the polymer film surface and/or alter the metal adhesion properties of the surface of the substrate by exposing the substrate to a flame. The flame is supported by an oxidizer and fuel mixture that includes an effective amount, for modifying the polymeric substrate, of at least one sulfur-containing compound that functions as a fuel substitute. In addition, substrates are provided that have increased wettability or increased metal adhesion performance.
